Meteor Agricultural Nets

Important Installation Instructions

- 1) Before installation, carefully check the net for any defaults. Do not install nets with holes or any damage. Check actual width and length before starting the installation.
- 2) Check that the frame, structure or wall to which the insect net will be fastened is as square as possible, to eliminate twisting or shortage of fabric.
- 3) Metal parts should not touch the net. In the summer, heat accumulated in metal parts and might damage the plastic net. Therefore, it is important to cover metal parts with white paint or white tape to protect the net. Unprotected metal cables or metal parts are harmful to the net and can cut it in matter of hours.
- 4) Avoid any friction between the net and sharp of hard surfaces in the construction.
- 5) Don't let chlorine based products touch the net directly or indirectly. Chlorine and sulfur deteriorates the net by chemical reaction. Meteor will not be responsible for damaged caused by use of chlorine or sulfur based chemiclas.
- 6) When you install the net, keep the net squares and parallel to the sides of the greenhouse. This will keep the fibers of the net parallel. If the fibers are not parallel to the greenhouse sides, the net will be shortened in length and in width.
