## Flower Processing Tools

The Flower processing section is often the most neglected part of the farm. During this process it is not difficult to lose all efforts and money spent on growing the most perfect product. Mismanagement and bad handling can cause the best quality product to become of no value to the customer.

This is the last chance for the grower to nurse his 'babies' before they are put in the marketing channel.

Flower processing Machines can make a major contribution to maximising the speed of grading, de-leafing, cutting and bunching processes whilst maintaining the highest quality and by minimising unnecessary handling, the highest quality of the flowers can be maintained.

J. J. Overseas has designed and developed various Flower processing Machines specially for the Floriculture industry. There are many steps to take during the process of changing from hand grading to a completely automated system. We provide the products and flexibility to create a faster and more efficient system enabling the grower to gradually upgrade its existing system in order to achieve a more uniform and better product, which meets the constant change a consumer demands.

J.J. Overseas has the following 'GreenTouch' range of flower processing tools:

01. De-Leafing Machines:

Superior and elegant design de-leafing machine with brushes on both the sides of the machine making two people work simultaneously at the same time. Constant speed through 3PH, 1.5HP Motor and equipped with comb rubber brushes that are easy to mount and last longer.

02. Flower Bunch Cutter:

The sharpest cutting unit for bunches up to max 12cm dia. Made from special hardened steel that stays for a longer period. Remember, a clean cut improves the water uptake and reduces risk of bacterial attack.

03. Level Head Bunching Box:

Made from Stainless steel, this equipment is a handy tool to avoid the grimy, uneven looking bunches from the top. This tool helps in arranging the flowers in a straight level from the top, making the flowers inside the wrapper look visibly leveled from the top.

We also make grading tables as per the requirement of the grower on special requests.
